
John Bono

Android Developer

(650) 207-7832

johnlbono@gmail.com

web: <https://bonoj.github.io>

git: <https://github.com/bonoj>

in: www.linkedin.com/in/bonoj

SKILLS

Languages:	Java, XML, Groovy, SQL
Libraries:	Google Play Services, Volley, Glide, EventBus
Backends:	Google Cloud Platform APIs, Firebase
Frameworks:	Android SDK, LibGDX, Ashley ECS

PROJECTS

Arcana: 2D Action Adventure - <https://github.com/bonoj/Arcana>

- Harnessing the Ashley Entity-Component System and Tiled to develop a platformer powered by the libGDX Game Engine
- Refining projectile physics and collision detection to increase player immersion

Third Eye: Augmented Reality Exploration - <https://github.com/bonoj/ThirdEye>

- Created a custom overlay view to display 20 searchable nearby locations
- Fused sensor data with Google Play APIs to bind information to real world objects
- Increased network efficiency by 80% with Volley data and Glide image caching

Popular Movies: Mobile Movie Database - <https://github.com/bonoj/PopularMovies>

- Implemented an endlessly scrolling custom RecyclerView and CursorAdapter
- Leveraged core Android framework components including Fragments, Loaders, and Content Providers

WORK

Up Beet Kitchen, Inc Boulder, CO - *Android Developer (remote), 2017 - PRESENT*

- Build intuitive mobile client for Food Journal using Material Design principles
- Create Trivia Quiz game feature with embedded video conferencing via Zoom API
- Collaborate with web development team to integrate with existing database and authentication architectures

EDUCATION

Udacity - *Android Developer Nanodegree, 2017*

University of Florida - *Software Engineering, 2002*
